

DAC 8 DSD High-End D/A converter

Super HD for all formats

The new DAC 8 DSD is equipped with unique T+A converters, and actually features separate converters for DSD and PCM. The True 1-bit Converter processes DSD files up to DSD 512, while the Quadruple Converter (8 x 32-bit) handles PCM files up to 384 kSps. It could be described as the perfect unit for use with digital sources in a classic High-End system which is not capable of processing digital sources directly, or not at sufficiently high quality.

But it is even more capable than this: with its superb pre-amplifier and sophisticated volume control it can also drive very high-quality output stages or active speakers, enabling it to take its place as the High-End command centre of a complete system. The DAC 8 DSD now also features an outstanding headphone amplifier capable of handling high currents, designed for use with High-End headphones.

The DAC 8 DSD offers comprehensive connection facilities:

Symmetrical and asymmetrical outputs, 1 digital output, 7 digital inputs, 1 high-res computer USB input (Device Mode), SYS IN socket for connecting source devices, CTRL socket for external control and updates.
