

MP 3100 HV

The brilliant all-rounder

The MP 3100 HV is our latest and finest multi-source player. Its brilliant design philosophy enables the machine to reproduce virtually every imaginable source in totally High-End quality. It is equipped with an SACD / CD drive which is a completely new development, and also features our latest streaming client, an outstanding digital tuner offering FM, FM-HD and DAB+ capability, an aptX™ Bluetooth module and a digital input board with seven professional inputs. The converters are unique: DSD signals up to DSD 512 are converted in native form by the T+A True 1-Bit converter, while PCM signals up to 384 kSps are handled by the T+A double-differential quadruple converter.

The back panel shows that the MP 3100 HV is a true all-rounder: High-End analogue outputs in symmetrical (XLR) or asymmetrical (RCA) form, LAN, WLAN and USB ports, digital tuner, FD 100 radio remote control handset, Bluetooth aerial and Digital Connecting Board with seven inputs for external sources. There are separate mains sockets for analogue and digital mains sections.
